

OPIS PREDMETA / SUBJECT SPECIFICATION

Predmet:	Izbrana poglavja iz humane ekologije
Subject Title:	Selected Topics in Human Ecology

Študijski program Study programme	Študijska smer Study field	Letnik Year	Semester Semester
Doktorski študij Ekološke znanosti / Doctoral Study Ecological Sciences		Izbirni 1 ali 2 ali 3	2 ali 3 ali 4 ali 5

Univerzitetna koda predmeta / University subject code:

Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Lab. work	Teren. vaje Field work	Samost. delo Individ. work	ECTS
5	5				140	5

Nosilec predmeta / Lecturer:

Tone NOVAK

Jeziki / Predavanja / Lecture: slovenski / Slovenian
Languages: Vaje / Tutorial: slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Poznavanje ekologije na ravni univerzitetnega
programa

Knowledge of ecology and at graduate level

Vsebina:

Obravnavana so izbrana poglavja iz naslednjih
sklopov.

Humana ekologija je interdisciplinarna znanost in
veda o človeku in njegovem okolju. Človeštvu vpliva
na svoje okolje s kulturo in delovanjem. Pri
primitivnih ljudstvih prevzame človeška vrsta vlogo
dominantne vrste v lokalnih ekosistemih, v moderni
tehnološki družbi pa smo postali ljudje del
globalnega sistema proizvodnje in potrošnje ter s
tem eden najvažnejših dejavnikov globalnih
sprememb na Zemlji, ki pa se odražajo na vseh
ravnih. Bistvo predmeta je interdisciplinarni pristop
in predstavitev odnosa človeka do narave in okolja
ter njegov vpliv v ekosferi. Podana so teoretična
izhodišča, pomembna za razumevanje človeške
vloge na Zemlji, odnos človeka do narave in pomen
okoljske etike, povezovanje in sodelovanje med
disciplinami kot tudi načrtovanje, sprejemanje
odločitev in ukrepov za doseganje trajnostnega
razvoja kot osrednjega cilja razvite družbe.
Diskusionsko je predstavljen pregled stanja na
področju "humane ekologije" v Sloveniji, v Evropi in
v svetu.

Contents (Syllabus outline):

Selected topics in the following chapters are
discussed.

Human ecology is an interdisciplinary study of the
relationships between human species and the
environment. Humans affect their environment
through their cultures and their activities. In primitive
societies, the human species dominated the local
ecosystems, while in modern technological societies
humans are part of a global system of production and
consumption, and through these activities one of the
major factors causing the global environmental
changes. The scope of the study is an
interdisciplinary approach to and understanding of
the human species in the context of the
environmental characteristics. The complex human-
environment interactions result in changing of the
Earth. Students profit basic theoretical knowledge
important in understanding the role of the human
species in the ecosphere, interrelationship between
humans and nature, the importance of environmental
ethics, links and interaction with other disciplines as
well as planning, decision-making towards achieving
sustainable development, as a principal aim of the
contemporary human society. An overview of the
actual state of human ecology in Slovenia, in Europe
and globally is discussed.

Temeljni študijski viri / Textbooks:

- Millennium Ecosystem Assessment, 2003: Ecosystems and Human Well-being: A Framework for Assessment, Island Press.
- Millennium Ecosystem Assessment, 2005: Ecosystems and Human Well-being: Synthesis, Island Press.
- Millennium Ecosystem Assessment, 2005: posamezna poročila (biotska raznovrstnost, voda in mokrišča, privatni sektor, človekovo zdravje) na: <http://www.MAweb.org>
- NAS, 2003: Frontiers in Agricultural Research: Food, Health, Environment and Communities, National Research Council, National Academy of Sciences, National Academies Press, Washington, DC.
- Nelissen, N. et al, Eds. 1997: Classics in Environmental Studies, An Overview of Classic Texts in Environmental Studies, International Books.
- Taylor, P.W. 1989: Respect for Nature, A Theory of Environmental Ethics, Studies in Moral Political, and Legal Philosophy, Princeton University Press.

Izbrani članki iz revij/selected papers from the journals: Environment, Development and Sustainability; itd./etc.

Cilji:

- Študenti se podrobno seznanijo z interaktivnimi: biotskimi, socialnimi in kulturnimi značilnostmi človeške vrste
- Podrobno poznajo osnovne principe delovanja človeštva na okolje
- Podrobno spoznajo vzroke za razkorak med družbeno ekonomiko in okoljskim ravovesjem
- Podrobno se seznanijo s pristopi, in ukrepi ter planiranjem trajnostnega razvoja

Objectives:

- Students learn about the interactive: biotic, social and cultural characteristics of the humankind in detail
- Students in detail learn about the principal impacts of humans upon environment
- Students learn in detail about the relationships and interactions to understand the causes of the gap between the societal economics and the balance in the natural environment
- Students study in detail approaches, measures and planning for sustainable development

Predvideni študijski rezultati:

Znanje in razumevanje:

- Študent dobi podroben pregled nad definicijami, pomenom in pomembnostjo delovanja človeka na okolje na lokalni, regionalni in globalni ravni
- Študent podrobno razume naravne in antropogene dejavnike stabilnosti oz. nestabilnosti okolja
- Podrobno spozna osnovne mednarodne konvencije povezane s humano ekologijo
- Podrobno se seznani z aktualnim stanjem na področju humane ekologije v Sloveniji, v Evropi in v svetu

Prenesljive/ključne spretnosti in drugi atributi:

- Študent usvoji podrobna vedenja in znanja za obnašanje v naravi in okolju ter za prepoznavanje obstoječega stanja okolja konkretne družbene skupnosti
- Zna podrobno primerjati obstoječe stanje z optimalnim v konkretnem okolju
- Zna se aktivno vključiti v interdisciplinarno iskanje rešitev za določene okoljske probleme v okolju

Metode poučevanja in učenja:

Intended learning outcomes:

Knowledge and Understanding:

- Students get a advanced overview of the definitions, meaning and importance of biodiversity on global, EU and national scales
- Students learn in detail about natural and anthropogenic driving forces of biodiversity change and gets insights into species biodiversity in different taxonomical groups in Slovenia
- Students learn in detail about international biodiversity related conventions and their role in decision making
- Students learn in detail about the actual state of human ecology in Slovenia, in Europe and in the World

Transferable/Key Skills and other attributes:

- Students capture detailed knowledge to understand the environmental conditions of a concrete society and the environment
- He/she can make a advanced comparison between the actual and the optimal conditions within a concrete environmental situation
- He/she can actively participate in resolving different environmental issues

Learning and teaching methods:
