matematiko

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Ravninska in prostorska geometrija
Course title:	Plane and solid geometry

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Matematika	Splošna matematika	2.	3.
Mathematics	General Mathematics	2.	3.

Vrsta predmeta / Course type

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Laboratory work	Teren. vaje Field work	Samost. delo Individ. work	ECTS

SLOVENSKO/SLOVENE

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Jih ni.

Prerequisites:

There are none.

Vsebina:

Trikotnik. Cevov izrek. Znamenite točke trikotnika. Eulerjeva premica, krožnica devetih točk. Simsonova premica, Ptolomejev izrek.

Krožnica. Potenca točke glede na krožnico, potenčna premica in potenčno središče. Eulerjev izrek.

Štirikotniki. Varignonov izrek. Tetivni štirikotniki. Napoleonovi trikotniki. Ploščina.

Content (Syllabus outline):

Triangle. Ceva's theorem. Basic triangle centers. Euler line, Nine-point circle. Simson line, Ptolemy's theorem.

Circle. Power of a point with respect to a circle, radical axis, radical center. Euler's theorem.

Quadrangles. Varignon's theorem. Cyclic quadrangles. Napoleon triangles. Area. Brahmagupta's formula. Heron's formula.

Brahmaguptova in Heronova formula.

Menelajev izrek in primeri uporabe.

Transformacije ravnine: izometrije (translacije, rotacije, zrcaljenja), raztegi. Inverzija.

Telesa. Prizma, piramida, valj, stožec, krogla. Volumen. Koti v telesih. Prostorski kot. Eulerjeva formula. Pravilna telesa.

Menelaus' theorem and applications.

Transformations: isometries (translation, rotation, reflection), dilatation. Inversion.

Solid. Prism, Cylinder, Cone, Sphere. Volume. Angles in solids. Solid angles. Euler polyhedral formula. Platonic solids.

Temeljni literatura in viri / Readings:

- Bogomolny, A. "Regular Polyhedra." http://www.cut-the-knot.com/do_you_know/polyhedra.html.

Cilji in kompetence:

Študent se seznani z osnovami pojmi in rezultati geometrije trikotnika, s transformacijami v ravnini in njihovo uporabo pri geometrijskih konstrukcijah ter z osnovnimi pojmi prostorske geometrije.

Objectives and competences:

Knowing fundamental concepts and results from triangle geometry. Understanding transformations of the plane and their applications to geometric constructions. Knowing fundamental results from solid geometry.

Predvideni študijski rezultati:

Znanje in razumevanje:

- Študent obvlada pojme in rezultate iz ravninske in prostorske geometrije v razširjenem srednješolskem obsegu.
- Študent vadi dokazovanje trditev iz ravninske geometrije in s tem spoznava drugačen, manj računski pristop k dokazovanju.
- Študent obvlada osnovne geometrijske konstrukcije, tako z uporabo klasičnih orodij, kot z uporabo računalniških geometrijskih orodij.
- Študent spoznava pomen transformacij, ki konkretne geometrijske situacije preslikajo v bolj ugodne.

Intended learning outcomes:

Knowledge and Understanding:

- Enlarging student's high school knowledge about the concepts and results from plane and solid geometry.
- Practicing the geometrical, noncomputational approach to proving results in plane geometry.
- Being able to accomplish basic geometric constructions applying classical tools as well as modern geometric computer tools.
- Understanding the importance of transformations of the plane mapping geometric configurations into more convenient ones.

Prenesljive/ključne spretnosti in drugi atributi: • Problemski pristop, kjer z računalniškim eksperimentiranjem tvorimo hipoteze in jih kasneje bodisi dokažemo bodisi ovržemo s protiprimeri. • Dojemanje transformacij kot opcije za pretvorbo matematične situacije v drugo situacijo, ki je udobnejša za obravnavo.		Transferable/Key Skills and other attributes: • Problem solving approach, consisted of computer experimentation, proposing hypothesis and finding either the proof or the counterexample. • Understanding the concept of transformations as tools to convert a certain mathematical situation into a more convenient one.	
Metode poučevanja in učenja: • Predavanja • Teoretične vaje • Laboratorijske vaje v računalniški učilnici • Individualno delo		Learning and teaching methods: • Lectures • Theoretical exercises • Excercises in computer room. • Individual work	
Načini ocenjevanja:		Assessment:	
Način (pisni izpit, ustno izpraševanje, naloge, projekt) Pisni test – praktični del Izpit (ustni) – teoretični del Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno. Pozitivna ocena pri pisnem testu je pogoj za pristop k izpitu.	Delež (v %) / Weight (in %) 50% 50%	Type (examination, oral, coursework, project): Written test – practical part Exam (oral) – theoretical part Each of the mentioned commitments must be assessed with a passing grade. Passing grade of the written test is required for taking the exam.
