

Univerza v Mariboru

Fakulteta za naravoslovje
in matematiko

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Kompleksna analiza
Course title:	Complex Analysis

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Matematika, 2. stopnja	Modul F2	1. ali 2.	1. ali 3.
Mathematics, 2 nd degree	Module F2	1. or 2.	1. or 3.

Vrsta predmeta / Course type

Univerzitetna koda predmeta / University course code:

SLOVENSKO/SLOVENE

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Poznavanje analize in kompleksnih števil.

Prerequisites:

Knowledge of analysis and complex numbers.

Vsebina:

Funkcije kompleksne spremenljivke. Elementarne funkcije v kompleksnem: linearne funkcije, ulomljene linearne funkcije. Potenčne vrste v kompleksnem. Elementarne funkcije, definirane s potenčnimi vrstami. Logaritem in ciklotometrične funkcije.

Holomorfne funkcije. Cauchy – Riemannov izrek. Konformnost holomorfnih funkcij.

Integral funkcije kompleksne spremenljivke. Cauchyjev izrek in Cauchyjeve formule.

Content (Syllabus outline):

Functions of complex variable. Elementary functions: linear function, Möbius functions. Power series. Elementary functions defined by power series. Logarithm and cyclometric functions.

Holomorphic functions. Cauchy – Riemann theorem. Conformality of holomorphic mappings.

Complex line integrals. Cauchy integral theorem and Cauchy formula. Liouville theorem. Power

Liouvilleov izrek. Taylorjeva vrsta.

Laurentova vrsta. Klasifikacija izoliranih singularnih točk. Mali Piccardov izrek. Izrek o residuih. Uporaba pri računanju realnih integralov.

Laplaceova in Fourierova transformacija. Uporaba.

series representation.

Laurent series. Classification of isolated singularity. Behaviour of holomorphic function near isolated singularity. Little Piccard Theorem. Residui theorem. Applications to the calculations of definite integrals and sums.

Laplace and Fourier transforms. Applications.

Temeljni literatura in viri / Readings:

- S. G. Krantz: *Handbook of Complex Variables*, Birkhäuser, Boston, 1999.
- J.B.Conway: *Functions of One Complex Variable I*, 2nd edition, Springer, New York, 1995.
- L. Ahlfors: *Complex Analysis*, 3rd edition, McGraw-Hill, New york, 1979.

Cilji in kompetence:

Študent poglobi znanje iz osnov teorije funkcij kompleksne spremenljivke ter poglobi znanje iz uporabnih aspektov te teorije, predvsem v povezavi s preslikovanji območij, pri računanju določenih integralov, seštevanju vrst ter reševanju diferencialnih enačb.

Objectives and competences:

Deepening the knowledge of concepts from the theory of functions of one complex variable. To deepen the knowledge of possible applications of this theory, specially in connection with transformations of the regions, calculating definite integrals and sums and solving differential equations.

Predvideni študijski rezultati:

Znanje in razumevanje:

- Študent razume pojem holomorfne funkcije pozna osnovne s tem povezane rezultate, posebej tiste, ki se nanašajo na integracijo in na integralsko reprezentacijo ter reprezentacijo s potenčno vrsto.
- Študent razume koncept preslikovanja območij z uporabo ulomljenih linearnih in drugih preprostejših elementarnih funkcij v kompleksnem.
- Študent razume pojem izolirane singularne funkcije in pozna uporabno vrednost izreka o residuumih.
- Študent razume koncepta Laplaceove in Fourierove transformacije in pozna njune možnosti uporabe.

Prenesljive/ključne spretnosti in drugi atributi:

- Ilustracija dejstva, da nam teorija, navidez oddaljene od realnosti, lahko ponudi mnoge praktično uporabne rezultate.
- Dojemanje transformacij kot opcije za pretvorbo matematične situacije v drugo

Intended learning outcomes:

Knowledge and Understanding:

- To understand the concept of holomorphic function and to know the basic results, specially those about line integrals and about the integral and the power series representation of holomorphic functions.
- To understand the concept of transforming plane regions using Möbius transformations and other basic elementary functions.
- To understand the concept of isolated singularity and to be aware of the importance of the residui theorem.
- To understand the concepts of Laplace and Fourier transformations and to be aware of their possible applications.

Transferable/Key Skills and other attributes:

- An illustration of the fact, that a more abstract theory can give us many nice results with useful practical applications.
- Understanding the concept of transformations as tools to convert a certain

situacijo, ki je udobnejša za obravnavo.	mathematical situation into a more convenient one.
Metode poučevanja in učenja:	Learning and teaching methods:
• Predavanja • Seminarske vaje	• Lectures • Tutorial
Načini ocenjevanja:	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt) Pisni test – praktični del Izpit (ustni) – teoretični del Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno. Pozitivna ocena pri pisnem testu je pogoj za pristop k izpitu.	Delež (v %) / Weight (in %) 50% 50% Type (examination, oral, coursework, project): Written test – practical part Exam (oral) – theoretical part Each of the mentioned commitments must be assessed with a passing grade. Passing grade of the written test is required for taking the exam.
