**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Znanje osnovnih pojmov in rezultatov iz analize
(zveznost, diferenciabilnost in integrabilnost;
zaporedja in vrste).

Basic knowledge of fundamental notions and results
of analysis (continuity, differentiability and
integrability).

Vsebina:

Content (Syllabus outline):

Izbrana so posebna poglavja iz realne analize, teorije mere in integriranja, kompleksne analize, teorije potenciala, več kompleksnih spremenljivk, posebnih funkcij, zaporedij, vrst, sumabilnosti, Fourierjeve analize, analize na mnogoterostih ali katerega drugega modernega področja iz analize. Izbera poglavij je odvisna od interesa in raziskovalne usmerjenosti študentov. Spodaj navedena literatura praviloma služi le kot osnova in je nadgrajena z bolj specializiranimi teksti.

Special topics in real analysis, measure and integration theory, complex analysis, potential theory, several complex variables, special functions, sequences, series, summability, Fourier analysis, analysis on manifolds, or some other area of contemporary analysis are chosen. The choice depends on students' interests and their research orientation. The literature below in principle serves only as a basis, and is combined with more specialized texts.

Temeljni literatura in viri / Readings:

- W. Rudin, Principles of mathematical analysis, McGraw-Hill, 1986
W. Rudin, Real and complex analysis, McGraw-Hill, 1987

S.G. Krantz, Function theory of several complex variables, John Wiley, 1982

Cilji in kompetence:

- študentu predstaviti moderno področje iz analize, kar lahko služi kot uvod v raziskovalno delo;
- Doseči poglobljeno razumevanje teoretskih in metodoloških konceptov s področja analize
- Razviti sposobnost za samostojno reševanje najzahtevnejših problemov iz analize.
- Zmožnost razvijanja kritične refleksije na področju analize

Objectives and competences:

- to present a modern area from analysis, which can serve as an introduction to student's research work;
- To achieve a deeper understanding of theoretical and methodological concepts of analysis
- To develop the ability for solving the most challenging problems in analysis.
- Ability to develop critical reflection in analysis

Predvideni študijski rezultati:

Znanje in razumevanje:

- poglobljeno znanje posebnega področja iz analize;
- poglobljeno razumevanje nekaterih posebnih pojmov iz analize.

Prenesljive/ključne spremnosti in drugi atributi:

- podlaga za raziskovalno delo na posebnem področju iz analize.

Intended learning outcomes:

Knowledge and understanding:

- a deeper knowledge of a special topic from analysis;
- a deeper understanding of some special concepts from analysis.

Transferable/Key Skills and other attributes:

- a basis for research in a special area of analysis
