UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Izbrana poglavja iz fiziološke ekologije rastlin
Course title:	Selected Chapters of Physiological Plant Ecology

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Biologija in ekologija z naravovarstvom, 2. stopnja	/	1/2	Poletni/ Zimski
Biology and Ecology with Nature Conservation, 2 nd Level	/	1/2	Summer/ Winter

Vrsta predmeta / Course type

Izbirni; Optional

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Laboratory work	Teren. vaje Field work	Samost. delo Individ. work	ECTS
15	15		15		135	6

Nosilec predmeta / Lecturer: Andreja URBANEK KRAJNC, Jana AMBROŽIČ DOLINŠEK

Jeziki /
Languages:

Predavanja / slovenski / Slovene
Lectures:
Vaje / Tutorial: slovenski / Slovene

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Pogojev ni.	None.
-------------	-------

Vsebina:

Content (Syllabus outline):

V predmetu je podrobneje izpostavljen vpliv naravnih in antropogenih stresnih dejavnikov na fiziološke procese v rastlini.

Pomanjkanje in prekomerna svetloba. UV žarčenje. Pomanjkanja in prebitek vode. Ekstremne temperature. Pomanjkanje in problem prekomernih koncentracij soli. Mehanske poškodbe. Onesnaževanje z atmosferskimi oksidanti in ksenobiotiki. Vpliv radioaktivnosti v okolju na rastline.

Funkcijske motnje celičnega metabolizma:

- Toksični efekti kisika na rastline
- Tvorba prostih kisikovih radikalov, reakcije v celici
- Motnje v metabolizmu ogljika

Vplivi okoljskih dejavnikov na fotosintezo, fotorespiracijo, dihanje ter pretok in porabo ogljikovih hidratov v rastlini

- Motnje v mineralni prehrani
- Vpliv okolja na presnovo mineralov; motnje v preskrbi; vpliv na simbiozo z rizosfernimi mikroorganizmi; podrobnejše so izpostavljene motnje v privzemcu, asimilaciji ter transportu žvepla, amonija in nitrata ter vgradnja v ogljikove spojine

Odzivi rastlin na stresne dejavnike

Obrambni in reparaturni mehanizmi, detoksifikacija prostih kisikovih radikalov z antioksidanti in encimi; aktualna doganjaja o vlogi glutationa, askorbinske kisline, tokoferola in karotinoidov v obrambi pred oksidativnim stresom

Bioindikacija onesnaževanja okolja

Reakcijski in akumulacijski indikatorji, kazalci in testni organizmi, metode biomonitoringa

The lecture focuses on the impact of natural and anthropogenic stress factors on physiological processes in plants.

The following chapters are discussed:

Deficiency and excess of light. UV radiation.

Deficiency and excess of water. Extreme

temperatures. Deficiency and high concentrations of minerals. Mechanical effects. Pollution with atmospheric oxidants and xenobiotics. The impacts of environmental radioactivity on plants.

Functional disturbances of cell metabolism

- Toxic effects of oxygen on plants

Formation of reactive oxygen species and reactions in the cell

- Disturbances in carbon metabolism

The influence of external factors on photosynthesis, photorespiration, respiration, the translocation and utilization of photosynthates in plants

- Disturbances in mineral nutrition

Habitat-related aspects of mineral metabolism; the disturbances in supply; the impact on symbiosis with the microorganisms in rhizosphere; this chapter focuses on the disturbances in the uptake, assimilation and transport of sulphur, ammonium ions and nitrate and their incorporation into carbon compounds

The response of plants to stress factors

Defense and reparatory mechanisms,

detoxification of reactive oxygen species with antioxidants and enzymes; recent advances in the role of glutathione, ascorbate tocofero and carotinoids in defense against oxidative stress

Bioindication of pollution impacts

Response and accumulation indicators, indicators and test organisms, biomonitoring methods

Temeljni literatura in viri / Readings:

- Brunold, Ch., A. Rüegsegger, R. Brändle, 1996: Stress bei Pflanzen. Verlag Paul Haupt, Stuttgart.
- Grill, D., M. Tausz, L. J. De Kok, 2001: Significance of glutathione to plant adaptation to the environment. Kluwer academic publishers, Dordrecht.
- Inzé, D., M. Van Montagu, 2002: Oxidative stress in plants. Taylor & Francis, Inc., New York.
- Larcher, W., 2003: Physiological Plant Ecology. Springer, Heidelberg.
- Taiz, L., E. Zeiger, 2010: Plant Physiology. Sinauer Associates, Inc., Publishers, Sunderland, Massachusetts.
- Varma, A., R. P. Beckett, I. Kranner, 2002: Protocols in Lichenology: Culturing, Biochemistry, Ecophysiology, and Use in Biomonitoring. Springer, Heidelberg.

Cilji in kompetence:

- Posebna pozornost je posvečena aktualnim doganjem o odzivu rastlin na izbrane okoljske dejavnike
- Ponazoritev toksičnih efektov kisika
- Predstavitev funkcijskih motenj celičnega metabolizma
- Ponazoritev simptomov poškodb na nivoju celic in celega organizma
- Vpogled v obrambne in reparaturne mehanizme
- Seznanjanje z rastlinsko bioindikacijo onesnaževanja okolja
- Predstavitev analitičnih metod v ekofiziologiji in stresni fiziologiji rastlin

Objectives and competences:

- Special attention is paid to the recent advances in the response of plants to stress factors
- Illustration of toxic effects of oxygen
- Introduction to functional disturbance in cell metabolism
- Illustration of injury patterns and symptoms on cell and whole plant level
- An insight into the defense and reparatory mechanisms
- Introduction of plant bioindication of pollution
- Introduction to the analytical measurements in ecophysiology and stress physiology of plants

Predvideni študijski rezultati:

Znanje in razumevanje:

- Znanje in razumevanje odziva rastlin na izbrane okoljske dejavnike
- Razumevanje toksičnih efektov kisika
- Poznavanje stresnih faktorjev, prepoznavanje simptomov poškodb in osnovnih obrambnih in reparaturnih mehanizmov
- Usvojitev metod bioindikacije onesnaževanja okolja z rastlinami
- Pridobitev znanja o principih in metodah v ekofiziologiji in stresni fiziologiji rastlin ter uporaba le tega v praksi

Intended learning outcomes:

Knowledge and understanding:

- Knowledge and understanding of the response of plants to stress factors
- Understanding of toxic effects of oxygen
- Knowledge of stress factors, identification of injury patterns and symptoms, understanding the basic defense and reparatory mechanisms
- Qualification of bioindication of pollution impacts with plants
- Achieving knowledge about the principles and methods in ecophysiology and stress physiology for good practice

Metode poučevanja in učenja:

- Predavanja
- Fitofiziološke raziskave z uporabo biokemijskih in fizioloških metod laboratoriju in na terenu s poudarkom na morfologiji in funkciji rastlin pod vplivom okolja
- Samostojno delo

Learning and teaching methods:

- Lectures
- Phytophysiological research using biochemical and physiological methods in laboratory and in field with special attention to environmental impacts to plant morphology and functions
- Independent work

Delež (v %) /

Weight (in %)

Načini ocenjevanja:**Assessment:**

Način (pisni izpit, ustno izpraševanje, naloge, projekt)		Type (examination, oral, coursework, project):
• Pisni izpit	50 %	• Written examination
• Seminarska naloga	30 %	• Seminar work
• Ocena izdelave in predstavitev poročil s laboratorijskih vaj	20 %	• Examination of preparation and presentation of laboratory exercises reports
