- To explain the role of cell membranes in general physiological processes
- To explain integrative role of sensory, hormonal and nervous system
- To present fundamental physiological processes in animal organisms.

**Predvideni študijski rezultati:****Intended learning outcomes:**

Po uspešno opravljeni učni enoti naj bi bili študenti zmožni:

- opisati vlogo membran pri temeljnih fizioloških procesih;
- razložiti zgradbo organov in povezavo zgradbe s funkcijo;
- načrtovati ter izvajati eksperiment in izsledke interpretirati;
- razumeti in zagovarjati etične principe pri poskusih na živalih.

By the end of this course students should be able to:

- explain the role of membranes in basic physiological processes;
- explain the structure of organs and the relationship of structure to function;
- design, conduct and report on experiments in animal physiology;
- explain and defend ethical approach in animal experiment.
