

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Geologija s paleontologijo
Course title:	Geology with Paleontology

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Univerzitetni študijski program Ekologija z naravovarstvom, 1. stopnja			
Undergraduate university programme Ecology with Nature Conservation, 1st degree		2.; 2nd	3.; 3rd

Vrsta predmeta / Course type

Obvezni / Obligatory

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Lab. vaje Laboratory work	Terenske vaje Field work	Samost. delo Individ. work	ECTS
30			15		75	4

Nosilec predmeta / Lecturer:

Bojana Dolinar

Jeziki / Languages:

Predavanja / Lectures: slovenski / slovene
Vaje / Tutorial: slovenski / slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Naravoslovna znanja na nivoju splošne mature.

Science knowledge at the level of the general baccalaureate.

Vsebina:

- Zgradba Zemlje, termodinamika
- Mineralogija: vrste in lastnosti mineralov
- Petrologija: nastanek, vrste in klasifikacija kamnin in zemljin, geološka zgradba in mineralne surovine v Sloveniji
- Geotektonika: teorija tektonike plošč
- Geodinamika:

Content (Syllabus outline):

- Earth constitution, thermodynamics
- Mineralogy: types and properties of minerals
- Petrology: origin, types and classification of rocks and soils, geological structure and mineral resources in Slovenia
- Geotectonics: the theory of plate tectonics
- Geodynamics:

<ul style="list-style-type: none"> -endodinamika: plutonizem, vulkanizem, seismologija -eksodinamika: preperevanje, erozija, abrazija, denudacija, kraški pojavi, plazovi • Hidrogeologija • Stratigrafija: starost kamnim • Paleontologija: nastanek življenja na Zemlji, teorija evolucije, metode fosilizacije, zgodovinski pregled pestrosti življenja in masovna izumiranja. 	<ul style="list-style-type: none"> -Endodynamics: plutonism, volcanism, seismology -Exodynamic: weathering, erosion, abrasion, denudation, karst phenomena, landscapes • Hydrogeology • Stratigraphy: age of rocks • Paleontology: Beginning of life on Earth, Theory of evolution, Methods of fossilization, Historical view of life variety and mass dying out.

- Skinner, B.J., Porter, S.C., Park, J. (1992) The Dynamic Earth. John Wiley & Sons.

Cilji in kompetence:

Cilj izbrane vsebine je pridobitev splošnih znanj o nastanku, spremembah, sestavi in lastnostih Zemljine skorje ter razvoju življenja. Snov predmeta je podlaga za razumevanje časovne percepcije današnjih procesov in pojavov, predvsem v zvezi z geomorfološkimi značilnostmi.

Objectives and competences:

The aim of the selected contents is gain of general knowledge about history, origin, composition and properties of earth's crust and evolution of life. The case of the subject should be the base of time perception of recent processes involved in geomorphological characteristics.

Predvideni študijski rezultati:

Znanje in razumevanje:

- Razumevanje nastanka in sestave mineralov, kamnin in zemljin ter s tem povezanih fizikalnih in mehanskih lastnosti.
- Poznavanje in razumevanje procesov, ki oblikujejo Zemljino površje in vplivajo na atmosfero, biosfero in hidrosfero.

Intended learning outcomes:

Knowledge and understanding:

- Understanding the origin and composition of minerals, rocks and soils and the associated physical and mechanical properties.
- Knowledge and understanding of the processes that shape the Earth's surface and affecting on the atmosphere, biosphere and

- Spoznavanje osnov in pomena paleontologije v geologiji.
- Poznavanje geološke zgradbe Slovenije.

Prenesljive/ključne spretnosti in drugi atributi:

Študentje razumejo, kako različni procesi, ki neprestano potekajo v zemljini notranjosti in na njeni površini, vplivajo na okolje in s tem na evolucijo vseh živih bitij. Poznajo najbolj razširjene vrste kamnin in njihove okvirne fizikalne lastnosti.

hydrosphere.

- Getting to know the basics and importance of paleontology in geology.
- Knowledge of the geological composition of Slovenia.

Transferable/Key Skills and other attributes:

Students understand how the different processes that are constantly taking place in the Earth's interior and on its surface, affect the environment and thus the evolution of all living beings. They know the most prevalent types of rocks and their indicative physical properties.

Metode poučevanja in učenja:

- Predavanja
- Laboratorijske vaje

Learning and teaching methods:

- Lectures
- Laboratory exercises

Delež (v %) /

Weight (in %)

Načini ocenjevanja:

Assessment:

• Pisni izpit	60	• Written exam
• Ustni izpit	40	• Oral exam
