Vsebina:

Predmet je pregledna predstavitev rastlinske biotehnologije s poudarkom na vplivih na okolje in človeško družbo. Podane so osnove različnih biotehnoloških metod s področij rastlinskih tkivnih kultur in genetskega inženirstva rastlin. Predmet omogoča osnovno razumevanje vpliva rastlinske biotehnologije na kmetijstvo, prehrano, medicino, industrijo in upravljanje z okoljem. Polemizira sporne vidike biotehnologije v zvezi z vplivi na okolje in človeško družbo.

Content (Syllabus outline):

The subject is an introductory course focusing on the impact of biotechnology on environments and human society. It introduces different biotechnological techniques, grouped in plant tissue culture, and plant genetic engineering. The subject enables basic understanding of impact of plant biotechnology on agriculture, food, medicine, industry, and environmental management. Controversial aspects of biotechnology are discussed in relation to their impact on environments and social community.

- Izbrani članki iz znanstvenih revij / Selected papers from scientific journals

Cilji in kompetence:

- Predstaviti rastlinsko biotehnologijo Predstaviti vpliv rastlinske biotehnologije na okolje in človeško družbo.
- Predstaviti različne biotehnološke metode s področij rastlinskih tkivnih kultur in genetskega inženirstva rastlin.
- Predstaviti vpliv rastlinske biotehnologije na kmetijstvo, prehrano, medicino, industrijo in upravljanje z okoljem.
- Predstaviti nasprotujoče si vidike biotehnologije, zlasti v zvezi z vplivi na okolje in človeško družbo.

Objectives and competences:

- Introduces plant biotechnology. Introduces the impact of plant biotechnology on environments and human society.
- Introduces different biotechnological techniques grouped in plant tissue culture and plant genetic engineering.
- Introduces the impact of biotechnology on agriculture, food, medicine, industry, and environmental management.
- Introduces controversial aspects of biotechnology, especially in the relation with environments and human society.

Predstaviti detekcijske in kvantifikacijske metode za spremljanje genetsko spremenjenih organizmov v surovinah in prehrambnih izdelkih.

Introduce detection of and quantification methods in genetically modified organism monitoring in raw materials and food products.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje osnov in uporabe rastlinskih tkivnih kultur.
Biologija gojenja rastlinskih celic.
Pregled genskega inženirstva rastlin.
Zgradba rastlinskih genov in razlike z ostalimi evkariotskimi in prokariotskimi geni
Kloniranje genov.
Genetsko spreminjanje rastlin.
Možnosti uporabe rastlinske biotehnologije.
Možni vplivi rastlinske biotehnologije na življenje posameznika.
Možni vplivi biotehnologije na okolje.
Etični, pravni, ekonomski in socialni vidiki rastlinske biotehnologije.

Prenesljive/ključne spretnosti in drugi atributi:

Osnovne spretnosti, pomembne za praktično eksperimentalno delo: opazovanje, merjenje, ravnanje z rastlinskim materialom, kemikalijami, steklovino, osnovnimi aparaturami, zbiranje rezultatov, načrtovanje poskusov, vrednotenje rezultatov, poročanje. Sodelovalno delo, projektno delo.
Poznavanje nekaterih laboratorijskih metod in tehnik dela.
Varno delo v laboratoriju.

Intended learning outcomes:

Knowledge and understanding:

Basic principles and application of plant tissue culture.
Biology of cultured plant cells.
An overview of genetic engineering of plants
The structure of plant genes and differences with respect to other eukaryotic and prokaryotic genes.
Cloning of a gene.
Genetic modifications of plants.
Abilities of using biotechnology.
Potencial impacts of biotechnology on individual's life.
Potencial impacts of biotechnology on environments.
Ethical, legacy, economics and social issues of plant biotechnology.

Transferable/Key Skills and other attributes:

Basic skills important for practical experimental work: observations, measurements, manipulation with plant material, chemicals, glass wares and other equipments, collecting data, designing experiments, analyzing data, reporting.
Collaborative learning, project work.
Knowledge of selected laboratory methods and techniques.
Safe working practice in laboratory.

Metode poučevanja in učenja:

- Predavanja s študijami primerov
- Laboratorijske vaje
- Seminar

Learning and teaching methods:

- Lectures with case studies
- Laboratory exercises
- Seminar

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Izpit, seminarska naloga s predstavitvijo in zagovorom, poročilo iz laboratorijskega dela

50/50/0

Exam, seminar work with presentation, laboratory report,
