Univerza v Mariboru

Fakulteta za naravoslovje in matematiko

UČNI NAČRT PREDMETA / COURSE SYLLABUS	
Predmet:	**Osnove analize**
Course title:	Basic Analysis

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Fizika, 1. stopnja		**1.**	**2.**
Physics, 1st degree		**1.**	**2.**

Vrsta predmeta / Course type	Obvezni / Mandatory
Univerzitetna koda predmeta / University course code:	

Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Laboratory work	Teren. vaje Field work	Samost. delo Individ. work	ECTS
60		**45**			**105**	**7**

Nosilec predmeta / Lecturer:	Uroš Milutinović

Jeziki / Languages:	**Predavanja / Lectures:**	SLOVENSKO/SLOVENIAN
	Vaje / Tutorial:	SLOVENSKO/SLOVENIAN

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	**Prerequisits:**
Priporočeno je predznanje maturitetnega kurza matematike.	Matura-level knowledge of mathematics is recommended.
Vsebina:	**Content (Syllabus outline):**

1. Funkcije ene realne spremenljivke. Pregled elementarnih funkcij. Zveznost in limita funkcij. 2. Definicija in geometrijski pomen odvoda, odvodi elementarnih funkcij, pravila za odvajanje. Analiza poteka funkcije; monotonost, konveksnost in konkavnost; ekstremi in prevoji. Lagrangeov izrek, L'Hospitalovo pravilo. Višji odvodi. 3. Zaporedja, vrste, potenčne vrste, Taylorjeve vrste. 4. Definicija nedoločenega integrala, metode integriranja, integrali elementarnih funkcij. Definicija določenega integrala. Newton-Leibnizova formula. Uporaba določenega integrala. 5. Pojem diferencialne enačbe.	1. Functions of one real variable. Elementary functions. Continuity and limits of functions. 2. Definition and geometric meaning of a derivative, derivatives of elementary functions, rules for calculating derivatives. Determining the graph of a function; monotonicity, convexity, maxima and minima, inflexion points. Mean value theorems. L'Hospital's rule. Higher order derivatives. 3. Sequences, series, power series, Taylor's series. 4. Indefinite integrals, methods of integration, integrals of elementary functions. Definition of the definite integral. The fundamental theorem of the calculus. Applications. 5. The concept of a differential equation.

Temeljni literatura in viri / Readings:

1. I. Vidav: Višja matematika I. Ljubljana, DZS, 1974
2. F. Ayres, J., E. Mendelson: Schaum's Outline of Calculus, New York, McGraww-Hill, 1962 (Fourth Edition, 1999)
3. E. Mendelson: 3000 Solved Problems in Calculus. New York, McGraw-Hill,1988

Cilji in kompetence:	**Objectives and competences:**
Študentje obvladajo temeljne pojme in metode analize, na nivoju diferencialnega in integralnega računa funkcij ene realne spremenljivke. Te pojme in metode so sposobni uporabiti pri nadaljnjem študiju fizike.	Students learn the fundamental concepts and methods of the calculus of functions of one real variable. The students are able to use the concepts and methods latter in the study of physics.

Predvideni študijski rezultati:	**Intended learning outcomes:**
Znanje in razumevanje. Po uspešnem zaključku tega predmeta bodo študentje: 1. Obvladali elementarne funkcije in njihove lastnosti. 2. Razumeli pojem limita funkcije in znali računati limite. 3. Razumeli pojem odvoda funkcij in znali računati odvode. 4. Znali uporabiti odvod pri analizi poteka funkcije; obravnavi monotonosti, konveksnosti	**Knowledge and understanding.** After successful conclusion of this course the students will: 1. Know elementary functions and their properties. 2. Understand the concept of the limit of a function and know how to calculate them. 3. Understand the concept of the derivative of a function and know how to calculate them. 4. Know how to use derivatives in determining the graph of a function; in study of monotonicity,

in konkavnosti; določanju ekstremov in prevojev. 5. Obvladali Lagrangeov izrek in L'Hospitalovo pravilo. 6. Obvladali delo z zaporedji, vrstami, potenčnimi vrstami, Taylorjevimi vrstami. 7. Razumeli pojem nedoločenega integrala, obvladali metode integriranja in jih znali uporabiti. 8. Razumeli pojem določenega integrala, obvladali Newton-Leibnizovo formulo in njeno uporabo. 9. Znali uporabiti določeni integral v različnih situacijah. 10. Ovladali osnovno o diferencialnih enačbah. **Prenesljive/ključne spretnosti in drugi atributi:** Matematično orodje, ki je nujno potrebno za delo pri vseh fizikalnih predmetih.	convexity, maxima and minima, inflexion points. 5. Know how to use mean value theorems and L'Hospital's rule. 6. Know how to use sequences, series, power series, Taylor's series. 7. Understand the concept of the indefinite integral and know the methods of integration, and how to use them. 8. Understand the concept of the definite integrals and know the fundamental theorem of the calculus, and how to use it. 9. Know different applications of definite integral. 10. Know the basics of differential equations. **Transferable/Key Skills and other attributes:** Knowledge of mathematical tools that is essential for all the subjects on physics

Metode poučevanja in učenja:	**Learning and teaching methods:**
• Predavanja • Teoretične vaje	• Lectures • Theoretical exercises

Načini ocenjevanja:		**Assessment:**
Način (pisni izpit, ustno izpraševanje, naloge, projekt) <u>Izpit:</u> Pisni izpit – problemi Ustni izpit – teorija Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno. Pozitivna ocena pri pisnem izpitu - problemi je pogoj za pristop k ustnemu izpitu – teorija.	Delež (v %) / Weight (in %) 50% 50%	Type (examination, oral, coursework, project): <u>Exams:</u> Written exam – problems Oral exam – theory Each of the mentioned assessments must be assessed with a passing grade. Passing grade of the written exam – problems is required for taking the oral exam – theory.

Pisni izpit – problemi se lahko nadomesti z dvema delnima testoma (ki sta sprotni obveznosti).		Written exam – problems can be replaced by two mid-term tests.
