**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Jih ni	No.
--------	-----

Vsebina:

- Uvod: razlaga pojmov, pomen in cilji sistematike in taksonomije, razvoj klasifikacije in sistemov, metode klasifikacije, sistematski nivoji in poimenovanja, botanično delovanje na Slovenskem
- Predstavitev skupin organizmov po organizacijskih tipih. (1) prokariotske alge (modrozelene cepljivke), (2) glive (prave glive), (3) evkariotske alge (evglenofiti, dinofiti, heterokontofiti, rodofiti, klorofiti), (4) embriofiti (mahovi, praprotnice, semenke/enokaličnice in dvokaličnice). Za vsako skupino so na primerih njenih najbolj tipičnih in/ali znanih predstavnikov predstavljene njene morfološke značilnosti, načini razmoževanja in ekologija. Poudarjena sta evolucijski aspekt in filogenija.

Content (Syllabus outline):

- Introduction: explanation of basic term, meaning and aims of systematic and taxonomy, development of classification and systems, methods of classification, systematic categories and nomenclature, botanical activity in the past in Slovenia
- Presentation of groups of plants according to organization types: (1) prokaryotic algae (Cyanobacteriota), (2) fungi (Eumycota), (3) eukaryotic algae (Euglenophyta, Dinophyta, Heterokontophyta, Rhodophyta, Chlorophyta) (4) Embryophyta (Bryophyta, Pteridophyta,Spermatophyta / monocotyledons/dicotyledones). For each group the morphological characteristics, types of reproduction and ecology are presented on the basis of their typical and/or known

	representatives. The evolutionary aspect and phylogeny are stressed.

Temeljni literatura in viri / Readings:

- Campbell, N.A. in J.B. Reece, 2005. Biology. 7th edition, Pearson/Benjamin Cummings, San Francisco.
- Moore, R. s sod. 1998. Botany. 2nd Edition
- Graham E. L. & Wilcox W. L., 1999: Algae. Prentice Hall, USA.
- Heywood, V., 1995: Cvetnice. Kritosemenke sveta. DZS, Ljubljana.
- Martinčič, A. (ed.), 2007. Mala flora Slovenije. Tehniška založba, Ljubljana.
- Raven, P.H. 2005. Biology of Plants. W.H.Freeman and Company /Worth Publishers
- P. Sitte s sod. 2002. Der Botanik für Hochschulen: begründet von E. Strasburger. 35. Aufl. Heidelberg, Berlin : Spektrum Akademischer Verlag

Cilji in kompetence:

- Razložiti osnovne pojme v povezavi s sistematiko in taksonomijo
- Predstaviti razvoj sistematike skozi zgodovino in najbolj uporabljene metode
- Predstaviti skupine organizmov (morfologijo, razmnoževanje, ekologijo), ki jih prištevamo k rastlinam na osnovi njihovih najbolj tipičnih in znanih predstavnikov
- Razložiti izvor in razvoj posameznih predstavljenih skupin
- Primerno predstaviti floro Slovenije

Objectives and competences:

- To explain basic terms related to systematic and taxonomy
- To present development of systematic through the history and the most often used methods
- To present groups of organisms (morphology, reproduction, ecology), which are grouped among the plants on the basis of their most typical and known representatives
- To explain the origin and evolution of separate represented groups
- To present the flora of Slovenia

Predvideni študijski rezultati:

Znanje in razumevanje:

- Poznati osnovne pojme v povezavi s sistematiko in taksonomijo
- Poznati razvoj klasifikacije in sistemov skozi zgodovino
- Poznati nekaj najbolj uporabnih metod klasifikacije
- Poznati osnovne skupine organizmov, ki jih obravnavamo v okviru sistematike rastlin in sicer na osnovi morfologije, razmnoževanja in ekologije najbolj tipičnih predstavnikov posameznih skupin
- Razumeti izvor in razvoj posameznih skupin

Prenesljive/ključne spremnosti in drugi atributi:

- Sposobnost prepoznavanja tipičnih predstavnikov modorzelenih cepljivk, alg, gliv, lišajev, mahov in praprotnic
- Prepoznavanje vseh lesnih vrst Slovenije,
- Sposobnost prepoznavanja družin in nekaterih rodov semenk
- Določanje praprotnic in semenk po dihotomnem ključu

Intended learning outcomes:

Knowledge and understanding:

- To distinguish term systematic and taxonomy
- To know the evolution of classification and systems through the history
- To know some mostly used classification methods
- To know the basic groups of organisms, which we treat in the frame of plant systematic on the basis of the morphology, reproduction and ecology of the most typical representatives for the each group
- To understand the origin and evolution of separate plant groups

Transferable/Key Skills and other attributes:

- Capability of recognition of tipical prokaryotic algae (Cyanobacteria), fungi (Eumycota), eukaryotic algae, Bryophyta, Pteridophyta,
- Recognition of all the woody species of Slovenia
- Capability of recognition of families and selected genera.
- Determination of Pteridophyta and Spermatophyta with dichotomic keys

Metode poučevanja in učenja:**Learning and teaching methods:**

<ul style="list-style-type: none"> - Predavanja - Laboratorijske vaje - Terenske vaje - Individualno določanje po dihotomnem ključu - Izdelava herbarija min. 100 rastlinskih vrst 	<ul style="list-style-type: none"> - Lectures - Laboratory excercises - Field excercises - Individual determination with dichotomic keys - Elaboration of herbarium with min. 100 plant species
