 Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

 Predznanje iz elektromagnetizma in
termodinamike.

Prerequisites:

 Preknowledge of electromagnetism and
thermodynamics.

Vsebina:

Predavanja: teoretični pregled vsebin laboratorijskih vaj.

Študent opravi 15 zahtevnejših vaj s področja termodinamike in elektromagnetizma.

Vsebine, ki so zastopane v vajah iz termodinamike so: odvisnost vredila vode od tlaka, temperaturno raztezanje, plinska enačba, specifična toplota trdnin in kapljevin, izparilna in talilna toplota.

Content (Syllabus outline):

Lectures: theoretical overview of the experiments.

Students perform 15 advanced experiments from thermodynamics and electromagnetism.

The experiments on thermodynamics contain: Clausius Clapeyrone equation, thermal expansion, ideal gas equation, specific heat of metals and liquids, heat of fusion, heat of vaporization.

Vaje z elektromagnetizma vsebujejo: električna vezja, notranji upor, temepraturni koeficient upora, merilniki temprature, električnega toka in napetosti, indukcija in generatorji, elektromotorji, elektroni v električnem in magnetnem polju, Coulombov zakon, Millikanov poskus, Hallov pojav.

The experiments on electromagnetism conatin: electrical circuits, internal resistance, temperaturecurrent- and voltage-meters, induction and generators, electromotors, electrons in electric and magnetic field, Coulomb law, Millikan experiment, Hall effect.

- websites of Department of Physics

Cilji in kompetence:

Študenti usvojijo osnovno znanje s področja toplote, termodinamike in elektromagnetizma. Pridobijo si primerne izkušnje in laboratorijske spremnosti, potrebne za samostojno delo pri demonstracijah in eksperimentalnih vajah. Navadijo se uporabljati ustrezno strokovno literaturo, svoje teoretično in računsko znanje in tudi druge informacijske vire. Usvojijo znanja, potrebna za pripravo kvantitativnega in kvalitativnega eksperimenta. Usposobijo se precizno in adekvatno poročati o svojih eksperimentalnih ugotovitvah.

Objectives and competences:

Students refresh and extend the knowledge from heat, thermodynamics and electromagnetism. They also acquire experiences and laboratory skills that are essential for an autonomous execution of demonstrative physics experiments related to aboveoutlined topics. Finally, they learn how to use their theoretical and practical knowledge, as well as information offered from secondary sources, to master problems that might occur during experimental work and report on their findings

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje osnovnih procesov v naravi in sposobnost njihove demonstracije v primerno opremljenem laboratoriju.

Prenesljive/ključne spremnosti in drugi atributi:

Didaktični pristop pri obravnavi naravnih pojavov ter sposobnost prenesti znanje laiku; ali predlagati matematično ali fizikalno rešitev specifičnega problema, ter tako pripomoči k njegovi rešitvi in razvoju v raziskovalno orientiranem okolju

Intended learning outcomes:

Knowledge and understanding:

Understanding of basic processes in nature and the ability to demonstrate them in an appropriately equipped laboratory.

Transferable/Key Skills and other attributes

A didactic approach to real-life phenomena and the ability to transfer this knowledge to a non-specialist; or to provide a detailed and accurate description of a particular problem and propose mathematically and physically motivated solutions, thus facilitating development in a research oriented environment

Metode poučevanja in učenja:

Learning and teaching methods:

Metodika obsega: teoretičen uvod v obravnavano snov ter nadzorovano samostojno izvedbo eksperimentov.	They are based on: theoretical introduction to specific topics and an autonomous supervised execution of experiments.
---	---

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt)		Type (examination, oral, coursework, project):
Opravljene laboratorijske vaje, izdelan dnevnik vaj in ustni zagovor vaj	30	Done experiments and the lab diary and the oral avocation of the experiment
Ustno ali pisno preverjanje pripravljenosti na vajo	20	Oral or written assessment of readiness for the forthcoming experiment
Pisni kolokvij	20	Written test
Ustni in praktični izpi	30	Oral and practical exam
