 Nosilec predmeta / Lecturer: **Robert Repnik**

 Jeziki / Predavanja / Lectures: **slovenski/Slovenian**

 Languages: Vaje / Tutorial: **slovenski/Slovenian**

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogojev ni.
Priporočljivo predznanje iz elektromagnetizma in termodinamike.

None.
Recommended preknowledge of electromagnetism and thermodynamics.

Vsebina:
Predavanja

teoretični pregled zahtevnejših vsebin laboratorijskih vaj in uporabljenih merilnih tehnik.

Laboratorijske vaje

Študent opravi zahtevnejše vaje s področja termodinamike in elektromagnetizma.

Content (Syllabus outline):
Lectures:

theoretical overview of the demanding experiments and used measuring techniques.

Laboratory work

Student performs advanced experiments from thermodynamics and electromagnetism.

Vsebine, ki so zastopane v vajah iz termodinamike so: odvisnost vreliča vode od tlaka, izparilna in talilna toplota.

Vaje z elektromagnetizma vsebujejo: električna vezja, notranji upor, koeficient upora, merilniki električnega toka in napetosti, indukcija in generatorji, elektromotorji, elektroni v električnem in magnetnem polju, Coulombov zakon, Hallov pojav.

The experiments on thermodynamics contain:
Clausius – Clapeyrone equation, heat of vaporization.

The experiments on electromagnetism contain:
electrical circuits, internal resistance, current- and voltage-meters, induction and generators, electromotor, electrons in electric and magnetic field, Coulomb law, Hall effect.

Cilji in kompetence:

Cilj tega predmeta je, da študent usvoji temeljna znanja o merilnih tehnikah in metodah na področju elektromagnetizma in termodinamike ter se usposobi za samostojno varno izvedbo laboratorijskih vaj iz področja elektromagnetizma in termodinamike. Na osnovi eksperimentalno pridobljenih podatkov, v kombinaciji z ustreznim teoretičnim znanjem iz elektromagnetizma in termodinamike in drugimi informacijskimi viri ter računalniškimi simulacijskimi okolji so sposobni smiseln oblikovati končno rešitev problema.

Objectives and competences:

The objective of this course is for student to acquire basic knowledge in measuring techniques and methods used in electromagnetism and thermodynamics and is able to use the knowledge for individual safe laboratory work in the field of electromagnetism and thermodynamics. On the basis of experimentally obtained data combined with their theoretical knowledge in electromagnetism and thermodynamics as well as professional literature and computer simulation tools student is able to reasonably formulate the final solution of the problem.

Predvideni študijski rezultati:

Znanje in razumevanje:

Po uspešno zaključeni enoti je študent zmožen:

- uporabiti teoretična znanja iz področja termodinamike in elektromagnetizma za izvedbo laboratorijskih vaj,

Intended learning outcomes:

Knowledge and understanding:

On completion of this course student will be able to:

- use the knowledge from thermodynamics and electromagnetism to execute laboratory work,

<ul style="list-style-type: none"> - aplicirati teoretična znanja o merilnih tehnikah, - uporabiti ustrezne metode za obdelavo in analizo podatkov, - ovrednotiti in interpretirati rezultate ter jih povezati s teorijo, - precizno in adekvatno poročati o svojih eksperimentalnih ugotovitvah. <p>Prenesljive/ključne spremnosti in drugi atributi:</p> <p>Študent:</p> <ul style="list-style-type: none"> - pridobi laboratorijske spremnosti potrebne za samostojno delo pri demonstracijah in eksperimentalnih vajah s področja elektromagnetizma in termodinamike, - se priuči rokovanja z merilnimi napravami in laboratorijsko opremo, - prepozna možne vire nevarnosti pri eksperimentalnem delu in pozna postopke za varno delo v laboratoriju, - usvoji znanje potrebno za pripravo kvantitativnega in kvalitativnega eksperimenta s področja elektromagnetizma in termodinamike, - se seznani z iskanjem, sortiranjem in ustrezno rabo virov, - pridobi spremnosti uporabe programskih orodij za analizo podatkov eksperimentov s področja elektromagnetizma in termodinamike, - je zmožen presoje smiselnosti uporabe približkov, - je sposoben sodelovalnega učenja, - spozna didaktične pristope pri obravnavi naravnih pojavov ter pridobi sposobnost prenesti znanje laiku. 	<ul style="list-style-type: none"> - apply the knowledge of measuring techniques, - use appropriate methods for processing and analyzing data, - evaluate and interpret results and connect them with theory, - accurate and adequate reporting on their experimental work. <p>Transferable/Key Skills and other attributes</p> <p>Student:</p> <ul style="list-style-type: none"> - acquires experiences and laboratory skills that are essential for an autonomous execution of demonstrative physics experiments in the field of electromagnetism and thermodynamics, - gains ability of handling with measuring devices and laboratory equipment, - recognizes potential dangers in experimental work and knows procedures for safe laboratory work, - gains knowledge needed to produce quantitative and qualitative experiments, - gets acquainted with searching and sorting information sources and efficient use of sources, - acquires skills to use software tools for analyzing data from experiments in the field of electromagnetism and thermodynamics - is capable to judge the effective use of approximations, - is capable of collaborative learning, - gets acquainted with didactic approaches to study real-life phenomena and the ability to transfer this knowledge to a non-specialist.

Metode poučevanja in učenja:

- predavanja (razlaga, razgovor, demonstracija)
- laboratorijske vaje (metoda dela s tekstrom, pisnih in grafičnih del, metoda praktičnih del,

Learning and teaching methods:

- predavanja (razlaga, razgovor, demonstracija)
- laboratorijske vaje (metoda dela s tekstrom, pisnih in grafičnih del, metoda praktičnih del,

uporaba simulacij in programskih orodij za obdelavo podatkov, sodelovalno učenje, diskusija rezultatov) - elementi obrnjenega poučevanja	uporaba simulacij in programskih orodij za obdelavo podatkov, sodelovalno učenje, diskusija rezultatov) - elementi obrnjenega poučevanja
---	---

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt):		Type (examination, oral, coursework, project):
Opravljene vse laboratorijske vaje, izdelan dnevnik vaj in ustni zagovor vaj	30	All experiments done, done laboratory report, and the oral avocation of experiments
Ustno in pisno preverjanje pripravljenosti na vajo	20	Oral and written assessment of readiness for the forthcoming experiment
Pisni kolokvij	20	Written test
Ustni in praktični izpit	30	Oral exam
Vsaka izmed naštetih obveznosti mora biti opravljena s pozitivno oceno.		Each of the mentioned commitments must be assessed with a passing grade.
Pozitivno ocenjeno poročilo laboratorijskih vaj z zagovorom, pozitivno ocenjeno preverjanje pripravljenosti na vaji in pozitivna ocena pri pisnem kolokviju so pogoji za pristop k ustnemu izpitu.		Positive grade of laboratory report and advocacy, positive grade of readiness assessment and positive grade of test are a prerequisite for access to oral examination. All experiments done, done laboratory report, and the oral avocation of experiments
