Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Prerequisites:

Jih ni.

No.

Vsebina:

Najprej so utrdijo osnovni pojmi splošne kemije, ki so nujno potrebni za razumevanje okoljskih kemijskih procesov, v drugem delu predmeta pa je več povedano o kemiji procesov v okolju.

Poudarek je na naslednjih poglavjih:

- Kaj je okoljska kemija
- Človeški vplivi na biogeokemijske cikluse
- Sestava atmosfere, urbana atmosfera
- Učinki onesnaženja zraka
- Procesi čiščenja zračnih polutantov
- Kemija stratosfere
- Mehanizmi kemijskega staranja materialov zaradi okoljskih procesov
- Organski polutanti
- Kemija celinskih in oceanskih voda
- Globalne spremembe

Content (Syllabus outline):

Firstly, basic principles and laws of general chemistry, which are needed for the understanding of the environmental chemistry, are explained. In the continuation of the course, the emphasis is on the chemistry of environmental processes.

The emphasis is on the following:

- What is environmental chemistry
- Human effects on biogeochemical cycles
- Effects of air pollution
- Processes of air purification
- Stratosphere chemistry
- Mechanisms of chemical weathering
- Organic pollutants
- Chemistry of continental waters and oceans
- Global changes

Temeljni literatura in viri / Readings:

1. S.E. Manahan, Environmental chemistry, CRC Press, 2010.
2. Connell, D. W., 2005: Basic Concepts of Environmental Chemistry, Lewis Publishers.
3. Lazarini, F., J. Brenčič, 1984: Splošna in anorganska kemija, DZS, Ljubljana.
4. Pine, S., 1996: Organic Chemistry 5th edition, McGraw Hill.
5. Tišler, M., 1982: Organska kemija, DZS, Ljubljana.

Cilji in kompetence:

- Razložiti strukturne vplive spojin na reaktivnost in metabolizem v okolju
- Predstaviti kemizem najpogostejših spojin, ki onesnažujejo okolje (polutantov)
- Predstaviti cikle elementov v okolju

Objectives and competences:

- To explain the structural influences of compounds on the environment
- To present the chemistry of the most common pollutants
- To present elemental cycles in environment

Predvideni študijski rezultati:**Znanje in razumevanje:**

- Prepoznavanje polutantov in toksinov v okolju
- Razumevanje osnovnih kemijskih procesov preoblikovanja molekul
- Razumevanje povezanosti kemijskih ciklusov okolja
- Osnovno znanje kemijske analize

Intended learning outcomes:**Knowledge and understanding:**

- Recognition of pollutants and toxins in environment
- Basic concepts of chemical reactions
- Understanding of environmental elemental cycles
- Bases of chemical analysis

Prenesljive/ključne spremnosti in drugi atributi:

- Prepoznavanje spojin v okolju in njihovega pomena
- Poznavanje in predvidevanje vpliva sintetičnih spojin na okolje

Transferable/Key Skills and other attributes:

- Recognition of compounds in the environment and their impact
- Prediction of the influence of synthetic compounds on the environment

Metode poučevanja in učenja:

Predavanja, seminarsko delo, laboratorijske vaje, terensko delo.

Learning and teaching methods:

Lectures, Seminar work, Laboratory experiments, Field work.

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Ustni izpit	65	Oral exam
Seminarska naloga	15	Seminar work
Laboratorijske vaje	20	Laboratory work
