**Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:**

Ni pogojev.

Prerequisites:

None.

Vsebina:

- Uvod v programske jezike: neformalna definicija programskih jezikov, delitve programskih jezikov, kratka zgodovina programskih jezikov.
- Vrednosti in tipi: delitev tipov, statično in dinamično preverjanje tipov, ekvivalenca tipov, vrste izrazov.
- Pomnilnik: spremenljivka, shranljive vrednosti, življenjska doba spremenljivk, vrste ukazov, izrazi s stranskimi učinki.
- Povezovanje: povezljive vrednosti, statični in dinamični doseg, vrste deklaracij, bločni ukazi in bločni izrazi, kvalifikacijski princip.

Content (Syllabus outline):

- Introduction to programming languages: informal definition of programming languages, classification of programming languages, brief history of programming languages.
- Values and types: type classification, static and dynamic type checking, type equivalence, kind of expressions.
- Storage: variable, storable values, variable lifetime, kind of commands, expressions with side effects.
- Binding: bindable values, static and dynamic scope, kind of declarations, block commands and block expressions, the

- Abstrakcije: princip abstrakcije, vrste abstrakcij, mehanizmi prenosa parametrov, korespondenčni princip, dosledni in normalni izračun.
- Ograjevanje: paketi, abstraktni tipi, objekti in razredi, generični moduli.
- Sistemi tipov: monomorfni in polimorfni sistem tipov, vrste polimorfizma. Generiki v programskejem jeziku Kotlin.
- Objektno usmerjeno programiranje: objekt, razred, meta-razred. Razredni objektno usmerjeni jeziki in prototipni objektno usmerjeni jeziki.
- Vrste dedovanja: enkratno/večkratno, razredno/objektno, striktno/nestriktno, urejeno/neurejeno, dinamično/selektivno, običajno/mixin. Vgnezdeni razredi v programskejem jeziku java.
- Funkcijsko programiranje: značilnosti funkcijskih jezikov, uvod v programske jezike lisp/haskell.
- Uvod v programske jezike Kotlin.

qualification principle.

- Abstractions: abstraction principle, kind of abstractions, parameter passing mechanisms, the correspondence principle, eager and normal evaluation.
- Encapsulation: packages, abstract types, objects and classes, generic modules.
- Type systems: monomorphic and polymorphic type systems, kind of polymorphisms. Kotlin generics.
- Object-Oriented programming: object, class, meta-class. Class-based object-oriented languages and prototype-based object-oriented languages.
- Kinds of inheritance: single/multiple, class-based/object-based, strict/non-strict, ordered/un-ordered, dynamic/selective, ordinary/mixin. Nested Java classes.
- Functional programming: characteristics of functional languages, introduction to Lisp/Haskell programming language.
- Introduction to programming language Kotlin.

Temeljni študijski viri / Textbooks:

- K.C. Louden: *Programming Languages: Principles & Practices*, Third Edition, Cengage Learning, 2013.
- P. Sestoft: *Programming Language Concepts*, Springer, Berlin, 2012.
- D. A. Watt: *Programming Language Design Concepts*, John Wiley, Chichester, 2004.

Cilji:

Cilj tega predmeta je razumevanje osnovnih konceptov programskega jezika in razumeti bistvene razlike med funkcijskim, proceduralnim in objektno usmerjenim programiranjem.

Objectives:

The objective of this course is to understand the basic concepts of programming languages and to understand essential differences between functional, procedural and object-oriented programming.

Predvideni študijski rezultati:
Znanje in razumevanje:

Po zaključku tega predmeta bo študent sposoben

- identificirati slabosti in prednosti posameznega programskega vzorca,
- izbrati primeren programski jezik za rešitev dane naloge,
- razumeti koncepte programskih jezikov, s pomočjo katerih se bo hitreje naučil novega programskega jezika,
- razumeti razlike med statičnim in dinamičnim tipiziranjem,
- razumeti različne oblike dodeljevanja pomnilnika,
- razumeti različne tehnike prenosa parametrov,
- razumeti različne oblike polimorfizma.

Prenosljive/ključne spremnosti in drugi atributi:

- *Spremnosti komuniciranja:* ustni zagovor laboratorijskih vaj, pisno izražanje pri pisnem izpitu.
- *Uporaba informacijske tehnologije:* uporaba različnih prevajalnikov in interpretatorjev.
- *Reševanje problemov:* načrtovanje in implementacija programov z uporabo različnih programskih vzorcev.

Metode poučevanja in učenja:

- predavanja,
- laboratorijske vaje,
-

Intended learning outcomes:
Knowledge and understanding:

On completion of this course the student will be able to

- identify shortcomings and advantages of particular programming language,
- select suitable programming language to solve particular problem,
- understand concepts of programming languages with the aim to quickly learn new programming language,
- understand differences between static and dynamic typing,
- understand different ways of memory allocation,
- understand different parameter passing techniques,
- understand different forms of polymorphisms.

Transferable/Key skills and other attributes:

- *Communication skills:* oral lab work defence, manner of expression at written examination.
- *Use of information technology:* use of different compilers and interpreters.
- *Problem solving:* program design and implementation using different programming paradigms.

Teaching and learning methods:

- lectures,
- lab work,
-

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment methods:

| Sprotni način | | Constant assessment methods |
|--|----------|---|
| <ul style="list-style-type: none"> • laboratorijske vaje, • 1. kolokvij, | 50 25 | <ul style="list-style-type: none"> • lab work, • 1st midterm examination, |

| | | |
|----------------|----|----------------------------|
| • 2. kolokvij. | 25 | • 2nd midterm examination. |
|----------------|----|----------------------------|

Opomba:

Kolokvija se lahko nadomestita s pisnim izpitom v deležu 50 %..

Note:

The midterm examinations may be replaced by written exam in the weight of 50%..
