Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoji za vključitev v delo: Pogojev ni.

Pogoji za opravljanje študijskih obveznosti:

Vsaka izmed definiranih obveznosti mora biti zaključena s pozitivno oceno. Ocena enaka ali višja minimalni (6/10) na testu iz predavanj, seminarjev in vaj, ki vsebuje problemske naloge, je predpogoj za pristop k ustnemu izpitu.

Prerequisites:

Prerequisites for attending the course: None.

Prerequisites for completing the course:

Each of the defined commitments must be completed with a passing grade. A grade equal to or higher than the passing minimum (6/10) of the problem-based test based on lectures, seminars, and practicals is required for taking the oral examination.

Vsebina:

Content (Syllabus outline):

<ol style="list-style-type: none"> 1. Molekularna narava zunajceličnih signalnih molekul 2. Molekularna farmakologija in toksikologija iono- in metabotropne sinapse 3. Elektrofiziologija ionotropnih receptorjev 4. Biokemija metabotropnih receptorjev 5. ATP, cAMP in kalcijevi ioni kot znotrajcelične celične signalne molekule iz zunaj- in znotrajceličnih virov 6. Kinetika znotrajceličnih signalnih molekul, oscilacije membranskega potenciala, presnove, kalcijevih ionov 7. Kontraktilni proteini, vezikli in druge tarčne molekule v znotrajcelični signalizaciji. 8. Kontrakcija in eksocitoza kot končna dogodka v sklopetvi med stimulacijo in kontrakcijo in med stimulacijo in sekrecijo 9. Kinetika kontrakcije in sekrecije 10. Funkcionalna sklopitev signalov med homo- in heterotipičnimi celicami v istem tkivu in sklopitev z drugimi, predvsem nadzornimi in tarčnimi tkivi. 11. Napredni fizikalni pristopi k analizi, interpretaciji in predstavitev fizioloških podatkov 12. Komparativna fiziologija celične signalizacije, evolucijski, embriološki in ontogenetski vidiki celične signalizacije 13. Kratka zgodovina razvoja področja in pregled Nobelovih nagrad na področju 14. Eksperimentalni vidiki in smeri razvoja – integracija znanja z metodologijo 	<ol style="list-style-type: none"> 1. Molecular nature of extracellular signaling molecules 2. Molecular pharmacology and toxicology of the iono- and metabotropic synapse 3. Electrophysiology of ionotropic receptors 4. Biochemistry of metabotropic receptors 5. ATP, cAMP, and calcium ions as intracellular signaling molecules coming from extra- and intracellular sources 6. Kinetics of intracellular signaling molecules, oscillations of membrane potential, metabolism, and calcium ions 7. Contractile proteins, vesicles, and other target molecules in intracellular signaling. 8. Contraction and exocytosis as terminal events in stimulus-contraction and stimulus-secretion coupling 9. Kinetics of contraction and secretion 10. Functional coupling of signals between homo- and heterotypic cells within the same tissue and coupling with other regulatory and target tissues. 11. Advanced physical approaches to analysis, interpretation, and presentation of physiological data 12. Comparative physiology of cell signaling, evolutionary, embryological, and ontogenetic aspects of cell signaling 13. A short history of field development and an overview of Nobel prizes awarded in the field 14. Experimental aspects and developments – integration with the methodology

Cilji in kompetence:

Poglavitni cilj predmeta je pridobitev znanj o strukturi in funkciji hormonov, nevrotransmitorjev in drugih ekstracelularnih signalnih molekul, o njihovi vezavi na receptorje, postreceptorskih znotrajceličnih signalnih poteh in celičnem odzivu. Prav tako bo študent dobil poglobljen vpogled v komunikacijo med celicami določenega tkiva in s celicami drugih nadzornih in tarčnih tkiv. Na osnovi znanja o normalni strukturi in funkciji bo študent dobil vpogled tudi v genetiko, toksikologijo in patofiziologijo najpogostejših bolezni sodobnega časa.

Med kompetencami bo študent razvijal predvsem:

- zmožnost analize in sinteze
- zmožnost uporabe znanja v praksi
- ustvarjalnost
- zmožnost učenja
- medosebne spretnosti
- znanje drugega jezika
- ustna in pisna komunikacija

Objectives and competences:

The major aim of the course is to gain knowledge on structure and function of hormones, neurotransmitters and other extracellular signaling molecules, their receptor binding, postreceptor intracellular signaling pathways and the cellular response. In addition, students will gain a deep insight into intercellular communication between cells of a given tissue, as well as with cells of other control and target tissues. On the basis of the knowledge about normal structure and function, students will gain insight into genetics, toxicology, and pathophysiology of most common diseases.

Among the competencies, the student will predominantly develop the following:

- the ability to analyze and synthesize
- the ability to apply knowledge
- creativity
- the ability to learn
- interpersonal abilities
- knowledge of a foreign language
- oral and written communication

Predvideni študijski rezultati:

Znanje in razumevanje:

Študent uporablja, analizira, sintetizira in kritično vrednoti na področju spodnjih ključnih vsebin:

- Struktura in funkcija zunajceličnih signalnih molekul
- Odgovor električno vzdražnih in

Intended learning outcomes:

Knowledge and understanding:

The student uses, analyzes, synthesizes, and critically evaluates the below key contents:

- Structure and function of extracellular signaling molecules
- Responses of electrically excitable and

<p>nevzdražnih celic</p> <ul style="list-style-type: none"> - Znotrajcelična signalna kaskada - Medcelična komunikacija - Zdravila, motilci in toksini - Metode za preučevanje signalizacije <p>Prenesljive/ključne spremnosti in drugi atributi:</p> <ul style="list-style-type: none"> - Komunikacija - Vodenje in upravljanje - Raziskovanje - Timsko delo - Samoupravljanje 	<p>non-excitable cells</p> <ul style="list-style-type: none"> - Intracellular signaling cascade - Intercellular communication - Drugs, disruptors, and toxins - Methods for studying signaling <p>Transferable/Key Skills and other attributes:</p> <ul style="list-style-type: none"> - Communication - Leadership and management - Research - Teamwork - Self-management
