**Vaje / Tutorial:**

**Študijski obveznosti:**

Znanje osnovnih pojmov in rezultatov iz analize (zveznost, diferenciabilnost in integrabilnost; zaporedja in vrste).

**Prerequisites:**

Basic knowledge of fundamental notions and results of analysis (continuity, differentiability and integrability ).

**Vsebina:**

Izbrana so posebna poglavja iz realne analize, teorije mere in integriranja, kompleksne analize, teorije potenciala, več kompleksnih spremenljivk, posebnih funkcij, zaporedij, vrst, sumabilnosti, Fourierjeve analize, analize na mnogoterostih ali katerega drugega modernega področja iz analize. Izbera poglavij je odvisna od interesa in raziskovalne usmerjenosti študentov. Spodaj navedena literatura praviloma služi le kot osnova in je nadgrajena z bolj specializiranimi teksti.

**Content (Syllabus outline):**

Special topics in real analysis, measure and integration theory, complex analysis, potential theory, several complex variables, special functions, sequences, series, summability, Fourier analysis, analysis on manifolds, or some other area of contemporary analysis are chosen. The choice depends on students' interests and their research orientation. The literature below in principle serves only as a basis, and is combined with more specialized texts.
